

# Flood Risk Management

- Presentations:
  - Experiences with flood risk management for Elbe River Basin
  - Flood mitigation in the Sava River Basin
- Discussion:
  - Need for strategic approach towards flood risk management in shared river basins
  - Give trans-national commissions and working groups strong mandate (or protocols) and focus on big issues
  - Integrate national institutions for performing the work (transposition and implementation) in the partner countries
  - Integrate headwater and upstream countries in flood forecast and early warning systems
  - make a clear hydrological structure of the river basin
  - establish information platform in the internet in order to minimise efforts for information exchange
  - integrate river wetlands into flood protection schemes also with a view to meet the requirements of WFD
  - integrate flood risk management with spatial planning, civil protection, agriculture and forestry
